Platforms

Mobile Applications Development

## Bringing Flash to New Places

Animated Media offers mobile applications development & tools that enable customers to create native apps with stunning Flash-based UIs and that run across popular devices like the Apple iPad & iPhone and Android smartphones/tablets. We bring cutting-edge graphics, advanced features, and hardware accelerated/optimized performance to apps - creating rich and engaging User Experiences that can be deployed across mobile, desktop and TV platforms.

Our solutions bring a mix of web functionality and Flash technology to support simultaneous live broadcast or streaming video, in-app advertising, and audience and social media interactivity in a single native application.

### App Building Blocks & Supported Features

- Streaming video, video capture & playback, annotate & edit video
- Access sites like YouTube, dynamically create lists & multi-stream playback
- Download/upload multimedia content from/to a website or cloud service
- Wi-Fi access to websites without using a browser
- Save content locally & selectively publish it to sites for sharing
- 3D applications with touchscreen, camera, audio & accelerometer
- Run multiple Flash animations , video, & UI simultaneously
- Easy steps to move existing Flash content to mobile platforms
- Interface to Java and HTML5 making it easier to maintain one code base
- Connect consumer's devices inside & outside the home with the same UI
- Support for Apple iOS, Android, Linux & Windows
